

## Loudspeaker Tattoos

Design connoisseurs often use "tattoos" to achieve certain effects in their living spaces. Tips on decorating walls or furniture with trendy decorative foils can be found in the current issues of trendy living and design journals. One novel idea is using tattoos to turn loudspeakers into extravagant, high-design acoustic furniture.

ELAC's FS 247 loudspeakers are available in a high gloss finish; starting immediately they are also being offered with attractive decorative motifs. The foils are tissue-thin, UV-resistant and protect against scratches or water. The motifs have been designed for the FS 247 and are very durable.

Depending on your personal style, you can select from tone-in-tone solutions, such as white matte motifs on high gloss white surfaces, or anthracite-coloured foils on titanium shadow loudspeakers. Those who prefer a high-contrast staging can select for silver or dark grey tattoos on white high gloss or titan shadow speakers. And if the motifs no longer fit into your style, the tattoos can be removed.

### Specifications ELAC FS 247

Dimensions	935/993/1021	Crossover Frequency	450/2500 Hz
Height (with/without base plate/spikes)	170/220	Nominal Power Handling	120 W
Width (with/without base plate)	270/285/320 mm	Peak Power Handling	160 W
Depth (with/without frame/base plate)	16kg	Frequency Range	30 - 50000 Hz
Weight	2 x 150 mm AS-XR cone	Sensitivity	89 dB/2.8V/m
Type	JET III	Nominal impedance	4 ohms
Woofer	30 – 250 W / Channel	Minimum impedance	3.4 ohms at 210 Hz
Midrange			
Tweeter			
Rec. Amplifier Power at Nominal Impedance
